01

CHAPTER 1

The AI Mindset Shift

Why most people use AI wrong — and the 3 principles that change everything

Right now, somewhere in the world, someone is using AI to write a slightly better email. They'll spend 20 minutes crafting a prompt, get a mediocre result, decide AI 'isn't for them,' and go back to doing things the slow way. Meanwhile, their competitor is saving 15 hours a week.

The difference isn't intelligence. It isn't technical skill. It's mindset. Most people treat AI like a magic 8-ball — ask a vague question, get a vague answer, walk away disappointed. High-performers treat AI like a highly capable new team member who needs context, direction, and clear expectations.

◆ The Core Shift

Stop thinking: 'Can AI do this?' Start thinking: 'How do I brief AI like I'd brief a brilliant assistant who started today?'

Principle 1: Context is Everything

AI tools have no memory of you between sessions. Every conversation starts from zero. The quality of your output is directly proportional to the quality of context you provide. Your role, your audience, your tone, your constraints — all of it must be stated explicitly. Never assume the AI knows who you are or what you're trying to accomplish.

A bad prompt: *'Write me a client email.'*

A great prompt: *'I'm a real estate agent writing to a first-time buyer named Sarah who just toured a 3-bedroom condo in Austin. She seemed excited but mentioned budget concerns. Write a warm follow-up email that acknowledges her excitement, gently addresses the value proposition of this specific property, and proposes a call this week. Keep it under 200 words, professional but conversational.'*

Principle 2: Iteration, Not Perfection

The first output is never the final output — and that's fine. AI works best as a collaborative draft-and-refine process. Generate something, identify what's off, give specific feedback, and iterate. Think of it as working with a very fast writer who needs editorial direction — not a machine that spits out finished work.

✓ The 3-Pass Rule

Pass 1: Generate the first draft. Pass 2: Ask AI to improve one specific thing (tone, length, structure). Pass 3: Do your own light edit. This 3-pass system gets you to 90% quality in a fraction of the time.

Principle 3: Leverage Your Domain Expertise

AI knows a little about everything. You know a lot about your field. Your job is to combine those two. Use AI for speed, structure, and scale — and use your expertise to guide it, fact-check it, and add the nuance that only comes from experience. The best AI-powered professionals are curators and directors, not passive recipients.

02

CHAPTER 2

Your AI Toolkit

The 7 tools you actually need — and the ones to ignore

There are now hundreds of AI tools competing for your attention and your money. Most of them are fine. A handful are genuinely transformative. Here's the honest breakdown.

ChatGPT (OpenAI)

Cost: Free / \$20/month

Best all-around writing, research, and reasoning tool. The GPT-4o model is excellent for most professional tasks. Start here if you're new.

Claude (Anthropic)

Cost: Free / \$20/month

Exceptional for longer documents, nuanced writing, and following complex instructions. Often produces more natural-sounding text than ChatGPT.

Gemini (Google)

Cost: Free / \$20/month

Deeply integrated with Google Workspace. Best choice if you live in Google Docs, Gmail, and Sheets.

Perplexity AI

Cost: Free / \$20/month

AI-powered research with real web sources. Use when you need current information with citations. Replaces hours of Googling.

Canva AI

Cost: Free / \$13/month

Design tool with powerful AI features for creating graphics, presentations, and visual content. No design skills required.

Otter.ai

Cost: Free / \$17/month

Transcribes meetings, calls, and voice notes automatically. Generates summaries and action items. A huge time-saver for client-facing roles.

Zapier AI

Cost: Free / \$20/month

Connects your apps and automates workflows. The AI features help you build automations in plain English without any technical knowledge.

◆ Start Simple

Don't try to implement all 7 tools at once. Start with ChatGPT or Claude for 2 weeks. Get comfortable with prompting. Then add one tool at a time based on your specific needs.

Tools to Skip (For Now)

Dozens of AI tools are essentially wrappers around ChatGPT with a markup price. Tools like Jasper, Copy.ai, and Writesonic can be useful but aren't necessary when you can get the same results directly from ChatGPT or Claude at a lower cost. Avoid tool-hopping — depth of use beats breadth of collection.

03

CHAPTER 3

AI for Real Estate Agents

Listings, client emails, market reports, and follow-ups on autopilot

Real estate is one of the best professions to leverage AI — the work is highly repetitive (emails, listings, follow-ups) but the context is always specific (this property, this client, this market). AI handles the repetition; you supply the context.

Property Listings That Convert

The average agent spends 45–90 minutes writing a single property listing. With AI, you can produce a first-rate listing in under 10 minutes. Here's the exact prompt:

◆ Listing Prompt Template

Write a compelling MLS property listing for: [3-bed, 2-bath, 1,850 sq ft condo in Austin TX]. Key features: [open floor plan, chef kitchen, rooftop terrace, garage parking, pet-friendly building]. Nearby: [Whole Foods, Lady Bird Lake trail, downtown 5 min]. Target buyer: [young professional or couple, first home, value walkability]. Tone: warm and aspirational but factual. Max 300 words. Include a strong opening hook.

Client Follow-Up System

Most agents lose business not because they don't care — but because consistent follow-up is hard to maintain across a large pipeline. AI makes this frictionless.

- Post-showing follow-up (warm, address specific objections from the tour)
- Offer submitted confirmation (reassuring, set expectations for timeline)
- Offer rejected (empathetic, pivot to next steps)
- Closing congratulations (celebratory, ask for referral naturally)
- Annual check-in for past clients (genuine, not salesy)

Market Update Reports

Position yourself as the local market expert by sending monthly market updates to your list. Pull the data yourself (days on market, median price, inventory) — then have AI write the narrative analysis and email in under 5 minutes.

My Real Estate AI Workflow (fill in your tasks):

04

CHAPTER 4

AI for Coaches & Consultants

Session prep, proposals, content creation, and client communication

For coaches and consultants, AI is a force multiplier on your most valuable asset: your expertise. You spend less time on administrative and content tasks, and more time doing the high-value work that clients pay you for.

Session Preparation

Before each client session, use AI to review your notes, generate a question bank based on where the client is in their journey, and draft a session agenda. This takes 5 minutes instead of 30.

◆ Pre-Session Prompt

My client [Name] is a [business coach working with solopreneurs]. Their goal: [build a 6-figure coaching practice]. Last session, we covered: [pricing strategy and they committed to raising rates by 20%]. They mentioned a challenge: [fear of losing current clients]. Generate: (1) 5 powerful coaching questions for this session, (2) a suggested 60-min agenda, (3) one resource or framework I might reference.

Proposals That Win

A great proposal is the difference between landing a \$10k client and losing them to a competitor. AI can help you write compelling, personalized proposals in a fraction of the time — as long as you provide rich context about the client's situation.

Content Creation at Scale

Most coaches know they should be creating content. Few do it consistently. AI removes the blank-page problem. Every client session is a content goldmine — the questions they ask, the breakthroughs they have, the misconceptions they arrive with. After each session, spend 10 minutes creating content from it.

- Turn a client insight into a LinkedIn post
- Expand a common question into a newsletter issue
- Convert a framework you use into a carousel post
- Repurpose a podcast interview into a blog post
- Write a case study from a client success story

05

CHAPTER 5

AI for Teachers & Educators

Lesson planning, rubrics, feedback, and parent communication

Teaching is one of the most AI-assisted-but-underserved professions. The administrative burden on teachers is enormous — and AI can absorb much of it, freeing you to do the irreplaceable work of actually teaching.

Lesson Plans in Minutes

A complete lesson plan that used to take 45–90 minutes can be drafted in under 10. The key is providing your curriculum standards, student context, and learning objectives. AI handles the structure; you bring the pedagogical expertise.

◆ Lesson Plan Prompt

Create a 50-minute lesson plan for Grade 7 English on [persuasive writing]. Standard: [CCSS.ELA-LITERACY.W.7.1]. Students have [basic paragraph writing skills] but struggle with [using evidence effectively]. Include: warm-up activity, direct instruction, guided practice, independent work, and exit ticket. Differentiation for 2 levels.

Feedback at Scale

Providing meaningful written feedback on 30 student essays is genuinely difficult to do well. AI can help you create feedback templates, generate specific comments for common issues, and draft individualized notes faster than typing from scratch.

Parent Communication

Sensitive parent emails — about behavior, grades, or concerns — are emotionally taxing to write. AI can help you draft a first version that is professional, empathetic, and clear, which you then review and personalize. This removes the emotional weight of starting from zero.

✓ Stay in Control

Always review AI-generated parent communications carefully. Add personal details and your voice. AI drafts; you sign. The relationship with the parent is yours to own.

06

CHAPTER 6

AI for Marketers

Ad copy, social content, SEO, and campaign strategy in minutes

Marketing is perhaps the field most transformed by AI tools. Content that used to take a team a week can now be produced by one person in a day. The marketers thriving in 2026 aren't being replaced by AI —

they're operating with 10x capacity because of it.

Ad Copy Frameworks

Great ad copy requires understanding your audience deeply. When you brief AI with real customer insights — their language, their fears, their desires — the output is dramatically better.

PAS (Problem-Agitate-Solution): Classic framework. AI can write 5 variations in 2 minutes.

AIDA (Attention-Interest-Desire-Action): Strong for longer copy. Brief AI with your value prop.

Before/After/Bridge: Emotional and concrete. Works especially well for transformation products.

Features/Benefits/Evidence: Ideal for technical or high-consideration purchases.

SEO Content at Scale

AI dramatically accelerates SEO content production. Use Perplexity to research a topic, Claude to write the long-form piece, and ChatGPT to generate meta titles, descriptions, and social snippets. A full content campaign that took weeks now takes days.

My Top 5 Marketing AI Use Cases (list yours):

07

CHAPTER 7

AI for Small Business Owners

Customer service, invoicing, scheduling, and reviews

Running a small business means wearing every hat — and AI can be the intern, the copywriter, the customer service rep, and the marketing manager you can't yet afford to hire.

Customer Service Templates

Build a library of AI-drafted responses to your 20 most common customer questions or complaints. Review them once, personalize the tone, and save them as templates. When the question comes in, you're copying and pasting — not writing from scratch.

Review Response Strategy

Responding to Google and Yelp reviews is important for SEO and customer trust — but most business owners ignore negative reviews out of discomfort or time constraints. Use AI to draft professional, de-escalating responses to negative reviews, and warm appreciative responses to positive ones.

◆ Negative Review Response Formula

Prompt: I received this negative review: [paste review]. My business is [type]. Write a professional, empathetic response that: acknowledges their experience, doesn't get defensive, offers a resolution, and invites them to contact us directly. Keep under 100 words.

08

CHAPTER 8

Prompt Engineering 101

The exact frameworks that get 10x better results

Prompt engineering sounds technical. It isn't. It's just clear communication — the same skills you use to brief a new employee or write a clear email. The better you get at this, the more powerful AI becomes for you.

The CRAFT Framework

C — Context — Who are you? Who is this for? What's the situation?

R — Role — Who should AI be? 'Act as an experienced marketing director...'

A — Action — What specifically do you want? 'Write / Analyze / Summarize / Create...'

F — Format — How should the output look? Bullet points, numbered list, email format, table?

T — Tone — Professional? Casual? Empathetic? Urgent? Specify exactly.

✓ The Role Trick

Assigning a role dramatically improves output quality. Compare: "Write a business plan" vs "You are a seasoned entrepreneur and business school professor. Write a business plan..." The second prompt gets you a completely different (and better) result.

Advanced Techniques

Once you've mastered basic prompting, these techniques take your results to the next level:

- Chain of thought: Add 'Think step by step' to complex problems
- Few-shot examples: Show AI 2-3 examples of what you want before asking
- Negative instructions: Tell AI what NOT to do (no jargon, no bullet points, etc.)
- Persona loading: Describe your target audience in detail for tailored content
- Output constraints: Specify length, word count, or structure precisely

My CRAFT Prompt Template (fill in your most-used task):

09

CHAPTER 9

Your 30-Day AI Integration Plan

Week-by-week system to build real, lasting AI habits

Information without implementation is just entertainment. This plan moves you from 'I read a guide about AI' to 'AI is now woven into my daily workflow.'

Week 1: Foundation

- Day 1–2: Create accounts for ChatGPT + Claude (free tiers)
- Day 3: Use AI to write your 5 most common email types
- Day 4–5: Experiment with the CRAFT framework on real work tasks
- Day 6–7: Save your best prompts to a 'Prompt Library' document

Week 2: Depth

- Pick ONE area from your profession chapters and go deep
- Build 3–5 reusable templates for your most repetitive tasks
- Measure: Track how much time you saved this week
- Share one AI win with a colleague or on social media

Week 3: Expansion

- Add one new tool from Chapter 2 (Perplexity, Canva AI, or Otter)
- Create a content piece using AI (newsletter, post, or report)
- Set up your first Zapier automation
- Review and refine your prompt library

Week 4: Systems

- Build a weekly AI workflow you can repeat every week

- Identify 3 more tasks you can automate or accelerate
- Calculate your monthly time savings
- Plan next month's AI learning objective

30-Day Launch Checklist

- ChatGPT or Claude account created
- First professional prompt written using CRAFT
- 5 email templates drafted with AI
- Prompt library document started
- First automation set up in Zapier
- Time savings tracked for week 1
- 30-day plan calendar blocked

10

CHAPTER 10

Advanced Workflows

Chaining tools together for maximum output

The real power comes when you stop using AI tools in isolation and start chaining them together. Here are three complete workflow examples for different professions.

The Content Machine (for Coaches & Marketers)

1. Record a 30-minute podcast or client call

2. Otter.ai transcribes it automatically
3. Paste transcript into Claude: 'Extract 10 key insights and 5 quotable moments'
4. Use Claude to write: 2 LinkedIn posts, 1 newsletter section, 1 blog intro
5. Use Canva AI to create graphics for the posts
6. Schedule everything in Buffer or Later

The Client Communication Pipeline (for Real Estate)

1. After a showing, dictate notes into your phone using voice memo
2. Otter.ai transcribes your notes
3. Feed notes into ChatGPT with your follow-up prompt template
4. Review and send within 2 hours of every showing
5. Zapier automatically adds the client to your CRM with the email logged

11

CHAPTER 11

Staying Ahead

How to keep up as AI evolves without feeling overwhelmed

AI is moving fast. The tools and techniques in this guide are current as of Q2 2026, but the landscape will continue to evolve. Here's how to stay ahead without spending 3 hours a day reading AI newsletters.

Weekly Reading (15 min/week)

One AI newsletter: The Rundown AI or TLDR AI. Skim headlines, read what's relevant to your field.

Monthly Skill-Up (1 hour/month)

Pick one new AI feature or tool to learn. Practice on a real work task.

Community

Join one professional community where AI use in your field is discussed. Reddit, LinkedIn groups, or Slack communities.

Annual Audit

Every January, audit your AI stack. Remove tools you don't use, add ones solving new problems.

12

CHAPTER 12

Prompt Template Library

14 ready-to-use prompts across every profession covered in this guide

Prompt 01: Property Listing

◆ Copy & Customize

Write a compelling MLS listing for [property details]. Target buyer: [describe].
Nearby amenities: [list]. Tone: aspirational but factual. Under 300 words.

Prompt 02: Client Follow-Up

◆ Copy & Customize

Write a warm follow-up email to [client name] after they [toured/offered/closed].
Address: [specific situation]. Tone: professional and genuine. Under 150 words.

Prompt 03: Market Report Narrative

◆ Copy & Customize

I have these local real estate stats for [month/area]: [paste data]. Write a
2-paragraph market commentary that a homeowner would find useful. No jargon.

Prompt 04: Coaching Session Questions

◆ Copy & Customize

My client [name] is working on [goal]. Last session: [summary]. Key challenge: [issue]. Generate 5 powerful coaching questions for today's session.

Prompt 05: Proposal Email

◆ Copy & Customize

Write a consulting proposal email for [client/company] who needs help with [challenge]. My approach: [brief description]. Investment: [\$X]. Tone: confident and client-focused.

Prompt 06: Lesson Plan

◆ Copy & Customize

Create a [length]-minute lesson plan for [grade] [subject] on [topic]. Standard: [code]. Differentiation for 2 levels. Include warm-up, instruction, practice, and exit ticket.

Prompt 07: Parent Email

◆ Copy & Customize

Write a professional, empathetic email to a parent about their child [situation]. Tone: direct but compassionate. Propose a next step. Under 200 words.

Prompt 08: Ad Copy (PAS)

◆ Copy & Customize

Using the Problem-Agitate-Solution framework, write ad copy for [product/service]. Audience: [describe]. Pain point: [specific problem]. Keep under 100 words.

Prompt 09: Social Media Post

◆ Copy & Customize

Write 3 variations of a [LinkedIn/Instagram/Twitter] post about [topic] for [my audience of description]. Tone: [adjective]. Include a call-to-action.

Prompt 10: Customer Service Reply

◆ Copy & Customize

Write a professional response to this customer message: [paste]. My business is [type]. Resolution I can offer: [what you can do]. Keep it brief and solution-focused.

Prompt 11: Negative Review Response

◆ Copy & Customize

Write a professional response to this negative review: [paste review]. Tone: empathetic, not defensive. Offer resolution. Invite them to contact us directly. Under 100 words.

Prompt 12: Meeting Agenda

◆ Copy & Customize

Create a [length]-minute meeting agenda for [purpose]. Attendees: [roles]. Goal of meeting: [outcome needed]. Format: time-blocked with owner for each item.

Prompt 13: Weekly Report

◆ Copy & Customize

Write a concise weekly status report for [my role/project]. Accomplishments: [list]. Challenges: [list]. Next week's priorities: [list]. Audience: [manager/team]. Under 300 words.

Prompt 14: Case Study**◆ Copy & Customize**

Write a client case study based on: Client situation: [before state]. Challenge: [problem]. My solution: [what I did]. Result: [outcome]. Format: narrative, under 400 words.

GROWTHVAULT

Premium guides for people who want to grow.

growthvault.co
