01

CHAPTER 1

The Solopreneur Chaos Problem

Why most productivity systems fail — and the one that doesn't

Running a solo business means every system, decision, and task lands on one person: you. Most solopreneurs manage this with a combination of sticky notes, email inboxes, scattered Google Docs, and an anxiety-inducing sense that something important is falling through the cracks.

◆ The Solopreneur OS Principle

One system. Everything in one place. Databases that talk to each other. Daily use takes 15 minutes. Weekly review takes 30 minutes. You always know what to work on next. You never lose a client detail or a task again.

02

CHAPTER 2

Notion Foundations

Setup, navigation, and core concepts in 20 minutes

Notion is built around pages, databases, and views. A page is a document. A database is a structured collection of pages (think: fancy spreadsheet). A view is a way of displaying a database (table, board,

calendar, gallery). The magic: databases can link to each other, and every page is a full document. Setup: Create a free account at notion.com. Install desktop app + mobile app. Create a root page called 'My OS.' Everything will live inside it.

03

CHAPTER 3

Client Management System

Track every client, project, and deliverable in one place

Create a Clients database with these properties: Client Name (title), Status (active/inactive/prospect), Contract Value, Start Date, Next Check-in Date, Primary Contact Email, Notes. Create a Projects database linked to Clients. Create a Tasks database linked to Projects. Now you can see: all tasks for a project, all projects for a client, every client and their status at a glance.

04

CHAPTER 4

The Content OS

Plan, create, and repurpose content across all platforms

Content database properties: Title, Platform (LinkedIn/Email/Twitter/Blog), Status (idea/drafting/review/scheduled/published), Publish Date, Content Type, Related Client or Topic. Views to create: Board view by status (your content kanban), Calendar view by publish date (your content calendar), Gallery view for inspiration/ideas.

05

CHAPTER 5

The Finance Dashboard

Income and expenses in one place — no more spreadsheet chaos

Create two databases: Income (linked to Clients) and Expenses (with category property). Use a dashboard page with linked views showing: total monthly income, total expenses, outstanding invoices, and upcoming payments. Notion formula properties can calculate totals, profit margins, and invoice aging automatically.

06

CHAPTER 6

Goals & Projects System

Annual goals → quarterly rocks → weekly priorities → daily tasks

The cascade: Annual Goals database (3–5 goals). Each goal links to Quarterly Rocks (3 per quarter). Each rock links to Projects. Each project has Tasks. Weekly review: look at this week's tasks through the lens of your quarterly rocks. Are you working on what matters? This system prevents the trap of being busy but unproductive.

07

CHAPTER 7

Knowledge Base

Capture, organize, and actually find information you've saved

Create a Resources database: Title, Type (article/book/course/tool), Topic tags, Key Takeaways (full text page), Date Saved. Use the Notion Web Clipper to save articles directly. After reading anything valuable, add 3 key takeaways. Search finds everything instantly. No more 'I saved that somewhere...'

08

CHAPTER 8

CRM for Solopreneurs

Track leads and relationships without enterprise software

Create a CRM database: Contact Name, Company, Status (lead/qualified/proposal/client/inactive), Last Touch Date, Next Action, Source (referral/LinkedIn/inbound), Revenue Potential. Review this weekly: Who haven't I followed up with? Who's been in 'proposal' too long? Who can I check in with today?

09

CHAPTER 9

Weekly & Daily Reviews

The 15-minute routines that keep the system working

Daily (5 min): Check today's tasks. Add anything new. Mark done. Weekly (30 min): Review all active projects. Update client statuses. Review CRM pipeline. Plan next week's top 3 priorities. Update content calendar. Monthly (60 min): Review goals progress. Review finances. Archive completed projects.

10

CHAPTER 10

Linking Everything

How the databases connect — the secret to a real OS

The power of Notion is relational databases. Your Tasks link to Projects which link to Clients. Your Content links to Topics which can link to Client work. Your CRM links to your Client database when a lead becomes a client. To set this up: use the 'Relation' property type to connect databases. Then use 'Rollup' to pull aggregated data (e.g., total project value per client).

11

CHAPTER 11

Customizing for Your Business

Templates for coaches, freelancers, creators, and consultants

The base system works for all solopreneurs. Coaches: add Session Notes linked to Clients, with homework and progress tracking. Freelancers: add Time Tracking linked to Projects for invoicing accuracy. Content Creators: expand Content OS with video scripts, drafts, and sponsorship tracking. Consultants: add Proposal tracking and deliverable templates.

12

CHAPTER 12

Keeping It Clean

The discipline that makes the system last

A system only works if you maintain it. The rules: 1. Everything goes in the system — don't have parallel lists. 2. Weekly review is non-negotiable. Skip it and the system breaks down. 3. When in doubt, delete it. A lean system is more useful than a bloated one. 4. Evolve it slowly — change one thing at a time and see if it improves your workflow.
